RadiantOne v7.3.30
Release Notes

August 18, 2023

These release notes contain important information about improvements and bug fixes for RadiantOne v7.3.30.

These release notes contain the following sections:

Improvements
Supported Platforms
Bug Fixes
Known Issues
How to Report Problems and Provide Feedback

Improvements

- [VSTS44737]: Added new vdprivileges: admin-write, logs-read, and security-write to allow delegated administrator roles access to pages previously restricted to superusers only.
- [VSTS45112]: Added support for a new property (srvRecordLimit) to control the number of servers read from AD Domain SRV records. This is configurable from Main Control Panel > Settings > Server Backend > Connection Pooling/Other.
- [VSTS45245]: Improved logging related to inter-cluster replication.
- [VSTS45380]: Added Persistent Cache refresh optimizations for handling concurrent modification of members for large groups.
- [VSTS45432]: Updated JDK version to jdk8u382-b05.
- [VSTS45623]: Added an LDAP Search Filter input field to the ICS upload UI to allow users to specify the filter for the upload.

Supported Platforms

RadiantOne is supported on the following 64-bit platforms:

- Microsoft Windows Server 2008 R2, 2012 R2, 2016, 2019, 2022
- Windows Servers Core
- Red Hat Enterprise Linux v5+
- Fedora v24+
- CentOS v7+
- SUSE Linux Enterprise v11+
- Ubuntu 16+

▪ Oracle Enterprise Linux 7/8/9

For specific hardware requirements of each, please see the RadiantOne System Requirements located in the Radiant Logic online knowledge base.

Bug Fixes

- [VSTS44648]: Fixed force leader button so FID leader can now be transferred.
- [VSTS45124]: Fixed a periodic refresh bug that would prevent new cron expression to be applied after a failure of communication with the backend during a refresh.
- [VSTS45348]: Fixed an issue that was preventing the RadiantOne Windows services from restarting properly, causing them to return "Error 200: The code segment cannot be greater than or equal to 64K".
- [VSTS45426]: Fixed an issue where whitespace characters combined with multi-valued RDNs could cause some LDAP searches to fail.
- [VSTS45449]: Fixed an issue where ACI filtering was not working properly unless the client query contained a requested attribute that was explicitly mentioned in the ACI settings.
- [VSTS45450]: Fixed an issue where the buttons were not working for the "*Abort Upload*" and *"Show Info"* for the Sync Monitoring Upload Processes popup.
- [VSTS45456]: Fixed an issue that prevented real-time persistent cache refreshes from being configurable for custom backends.
- [VSTS45548]: Fixed an issue where an updated CRON expression for periodic cache refresh is saved without requiring a restart.
- [VSTS45657]: Updated Bootstrap to version 3.4.1. Updated jQuery to version 3.7.0. Updated Angular to version 1.8.3 to address security vulnerabilities
- [VSTS45711]: Fixed an issue where the linked attribute optimizations were not properly saved and loaded for Universal Directory (HDAP) stores.
- [VSTS45727]: Fixed an issue with the node display paging process in the Main Control Panel > Dashboard tab.

Known Issues

For known issues reported after the release, please see the Radiant Logic Knowledge Base: https://support.radiantlogic.com/hc/en-us/categories/4412501931540-Known-Issues

How to Report Problems and Provide Feedback

Feedback and problems can be reported from the Support Center/Knowledge Base accessible from: https://support.radiantlogic.com

If you do not have a user ID and password to access the site, please contact support@radiantlogic.com.
